Thomas Thune Andersen is currently Chair of Lloyd's Register Group (since 2010) and Lloyd's Register Foundation (since 2013), where he leads one of the world's most respected maritime and safety institutions, with a focus on ocean sustainability, industrial integrity, and technological foresight. He is also a Board Member of BW Group and Cadeler, and a Non-Executive Director of IMI plc, where he served as Senior Independent Director from 2022 to 2024. He is also a Senior Adviser to Lambert Energy Advisory.

He served as Vice-Chair of VKR Holding A/S from 2011 to 2020 and subsequently as Chair from 2023 to 2025, demonstrating long-standing leadership within one of Europe's leading industrial groups. From 2016 to 2024, Thomas was Chair of Ørsted A/S, where he supervised the company's landmark transformation from a fossil-fuel-based utility into a global leader in renewable energy. His tenure is widely recognised for its strategic clarity, board discipline, and acceleration of offshore wind development on the international stage.

Earlier in his career, Thomas spent over three decades at the A.P. Moller–Maersk Group, where he held senior executive positions including President & CEO of Maersk Inc. and CEO of Maersk Oil. These roles gave him deep global operational leadership across shipping, logistics, and upstream energy.

He brings deep cross-sector expertise in:

- Renewable energy & energy transition – stewarding Ørsted's repositioning and scaling of global offshore wind capacity
- Maritime & industrial services – governing marine classification, risk management, and global infrastructure strategy
- Executive leadership in energy & shipping – managing large-scale, capital-intensive enterprises across global markets
- Cross-sector governance – advising private and listed companies through complex, multi-stakeholder landscapes

Thomas is a member of the Danish Committee on Corporate Governance, a Commissioner at the Energy Transitions Commission, and a Freeman of the City of London. He is widely respected for his steady strategic judgement, institutional stewardship, and ability to lead through complexity - qualities in increasing demand across the evolving energy, maritime, and industrial sectors.
